

Patient-Managed Bluetooth kit for chronic disease management, extending the reach of the clinic and healthcare specialists and enabling 'hospital in the home' services.

Includes an easy-to-use secure tablet to collect clinical data, Weight Scale (BMI), Blood Pressure Monitor, Glucometer, Pulse Oximeter and more.

Ability to monitor a wide range of chronic diseases such as:

- Congestive Heart Failure (CHF)
- Chronic Obstructive Pulmonary Disease (COPD)
- Diabetes
- Hypertension
- Acute Weight Loss / Gain
- Atherosclerosis
- High Risk Pregnancy
- Asthma
- Wound Management

Benefits include;

- **Reduced emergency hospital visits and admissions**
- **Shorter hospital stays**
- **Lower mortality rates for patients with chronic conditions**

How does the Remote Patient Monitoring kit work?

The Bluetooth low-energy devices in the kit wirelessly connect with the tablet interface. This allows the patient to upload their data to the cloud, where it can be analysed and actioned by healthcare providers, based on a patient care plan.

With full HL7 integration, patient data can also be synced to the EHR/EMR.

Proven in the field

A Remote Patient Monitoring trial for a US insurance company, including 3,000 patients with chronic conditions resulted in a 45% reduction in mortality rates and a 20% reduction in emergency admissions.

91% of care cases were resolved after the first virtual intervention.
